Unlocking more with Integrate Plus for monday.com and Slack

Onboarding freedom
Onboard seamlessly from both monday.com and Slack, choosing where you configure notifications. Unlike the native solution, we give you the power to set up notifications from both interfaces.

Streamlined notifications
Easily configure notifications for multiple actions on monday.com boards with a single checkbox in our onboarding flow. No need for individual recipes – efficiency at its best!

Take control within Slack
Move beyond just "👍" reactions! With Integrate Plus, you can assign items, add updates, change statuses, and manage your monday.com board items directly from actionable notifications in Slack.

Effortless updates
Reconfigure or update your notifications seamlessly through the home tab. Connect your monday.com instance to multiple Slack workspaces with ease and manage your personal monday.com account connections.

Smarter message actions
Create or update monday.com items directly from Slack conversations using message actions. Our app goes the extra mile:

- Pre-populates board info, saving you time.
- Supports multiple fields for input, keeping your board well-groomed.
- Embeds the entire message as an update for comprehensive context to avoid double-keying.

Subitem support
Experience subitem notifications, a feature not achievable with the native solution. Get notified about subitems just like regular items, enhancing your workflow.

### Upscale your collaboration experience with Integrate Plus for monday.com and Slack
